3-D HOME DESIGN

Think
in 3D

Building a new home or making renovations to your current home should not be frightening. A great deal of time and money is invested in a project with little to no idea of how it will look upon completion. How can you be sure that floor plan is going to look the way you want? myHouse for Windows is a home design package created with that problem in mind. Not only will it help you layout a full multistory floor plan or a renovation project, but it will let you see the results in photorealistic 3D before hammering the first nail.

Photorealistic Quality and more

myHouse is the only home design program with the visualization power you need due to its fast OpenGL based 3D graphics including support to hardware acceleration. With the DreamScape feature you can add photorealistic background or foreground to your design from any .BMP image. Also myHouse provides advanced ray-tracing for high-quality photorealistic image production. It uses information about textures, materials and light sources to produce truly realistic images. You can walk through your house as if you were really there using the QuickTime Virtual Reality viewer included in myHouse. In addition thanks to myHouse's sensational 3D MovieMaker technology, you can generate a movie tour of your new home.

Unlimited Symbols with 3D Modeler

Having the most pre-drawn 3D pick and place symbols was not enough for myHouse. Our extensive library of over 1000 symbols covers everything from kitchen to bedroom, deck to home office. Even if the symbol you want does not exist in our library, the built in 3D Modeler will help you create it. You can define textures, materials, reflections, transparency, light sources and more, to create your own photorealistic objects. You can design a whole line of furniture in your own library for use in myHouse, or modify to symbols currently in our library to fit your needs.

Advanced Roof and Stair Designer

With the new Stair Designer it is very easy to design and place stairs in your design. You can use the various templates or start from scratch and design your own custom stairs. The myHouse Roof Designer makes very easy to create and place a roof on your design. The Roof Designer automatically generates roofs or allows you to manually create or edit roofs and view the results in 3D.
